Eenadu Corporate Office, Ramoji Film City, Anajpur Village, R.R. Dist - 501 512. Telangana State, Ph: 040-2223 2223, Fax: 040-2223 2225

Date: 17-01-2024

The Secretary
A.P Electricity Regulatory Commission
4<sup>th</sup> Floor, Singareni Bhavan, Red Hills,
HYDERABAD-500004.

Dear Sir,

Sub: Submissions on the ARR and MYT proposals of APSPDCL, APCPDCL and APEPDCL for their distribution business for the 5<sup>th</sup> control period from 2024-25 to

2028-29 in OP Nos.74, 75 and 76 of 2023.

Ref: Public Notice dated 10.12.2023.

With reference to the public notice referred to above, inviting views, objections and suggestions on the subject proposals, we are submitting the following points for the consideration of the Honorable Commission.

We further request for permission to participate in the hearings through video conference, which are scheduled from 29.1.2024 to 31.1.2024.

Our Company owns and operates two solar power generating plants of 5 MW each at Tadimarri and Nidigallu in Anantapuram district under captive category.

## **Our submissions**

- The PLF of solar power plants is about 20% in Andhra Pradesh depending on the solar irradiation. Therefore, proposal to determine tariff based on Capacity to be transmitted will definitely result in a huge burden to the renewable energy industry and adversely impact its economic feasibility.
- 2. DISCOMs are allowing OA / Wheeling capacity within the CMD and the Consumer pays MD charges as per the terms and conditions of tariff. Thus, the DISCOM recovers its fixed cost in the form of MD charge. This indicates that the consumer always draws his required Demand within the CMD from the grid; be it from the DISCOM or from the OA-Generator/Exchange. In the absence of Wind/Solar/Mini-Hydel power, the short fall power required is drawn from the DISCOM and thus always uses the network and pays the fixed cost related to Transmission. The transmission and distribution business costs are already built in to the Retail tariff and are being recovered in the form of MD charges from a consumer, who is availing power through Open Access.
- Levy of Capacity based Transmission or Distribution tariff on NCE sources like, Solar, Wind and Mini Hydel power plants for which the PLF is around 20% to 23.5%, amounts to levy of 4 to 5 times of conventional power plant tariff. This is explained below with the help of an example.

Consider proposed transmission tariff of Rs 221.17/kW/Month. One kW conventional power plant generator can generate 720 units in a month and thus can pump 720 units into the grid. Whereas a Non Conventional power Plant of 1 kW capacity can generate 169.2 units in a month against the same 1 kW capacity as the PLF of NCE/Wind is around 23.5% only.

The transmission tariff proposed in the MYT ARR for the year 2024-25 is -221.17/kW/Month.

The per unit transmission charge — 221.17/720 = Rs. 0.31 /kWh for conventional plant

Regd. Office: 3rd Floor, Corporate Building, Ramoji Film City, Anajpur Village, R.R. Dist, Telangana State - 501 512. India

CIN No.: U40102TG1973PTC001763, Website: www.eenadu.net

The per unit transmission charge for any NCE source with a PLF of 23.5% — 221.17/169.2 = Rs.1.30/kWh which is 4 times of cost paid by conventional power plant generator. This is 4 times of conventional power tariff of Rs.0.31).

For the reasons mentioned above, we request you to consider levy of energy based Transmission/wheeling charge, instead of capacity based wheeling charge.

- It is further observed that there is an increase of more than 20% every year from 2024-25, on top of the huge increase proposed in Transmission and wheeling charges.
- To determine the wheeling tariff, no methodology is determined by the commission as specified for EHT vide Regulation 1 of 2019. The Commission has devised its own method and the method followed by the Commission is explained below.

The 33 kV ARR is determined as per the 33 kV network cost. The 33 kV ARR is split into three parts - viz.,

- ARR in proportion to 33 kV consumer demand would be allocated to 33 kV system.
- ARR in proportion to 33 kV demand reflecting on 33 kV level from 11 kV consumers would be allocated to 11 kV.
- ARR in proportion to 33 kV demand reflecting at 33 kV level from LT consumers demand would be allocated to LT system.
- The Commission has adopted different methods for determining EHT Transmission charges and Distribution charges viz, 33 kV, 11 kV and LT network wheeling charges. This approach is to be rectified.

If the same principle as mentioned in Para 5 above is followed, we may have to allocate or pass on the EHT network ARR cost (by deducting pro-rata cost in proportion to Demand from EHT consumers) to 33 kV network in proportion to 33 kV demand reflecting on the EHT network from 33 kV consumers and so on to 11 kV and LT network. If it is done, the 33 kV, 11 kV and LT ARR would increase to abnormal level, and this would not reflect realistic tariff. But the ARR pertains to EHT network is distributed among all category of consumers and Retail Supply tariff is determined.

Since EHT network is handled by APTRANSCO, its ARR is recovered based on Total Transmission Capacity, without any prorate allocation of EHT Demand to EHT consumers and passing on the balance Demand to 33 kV system (Distribution business). Please note that there is no prorate allocation of network cost in between 220 kV network and 132 kV network. The Total EHT ARR is recovered based on Total Transmission capacity without any reservation based on 220 kV consumption and 132 kV consumption.

The proposed Wheeling Tariff and the proposed Wheeling ARR are shown in the table below:

Wheeling Charges for Long Term OA Agreements:

| Voltage Level         | FY 25  | FY 26   | FY 27   | FY 28   | FY 29   |
|-----------------------|--------|---------|---------|---------|---------|
| 33 kV (Rs./kva/month) | 64.26  | 88.99   | 151.20  | 203.54  | 222.33  |
| 11 kv (Rs./kva/month) | 671.48 | 792.75  | 1070.82 | 1267.28 | 1352.28 |
| LT (Rs./kva/month)    | 855.80 | 1007.51 | 1375.28 | 1618.62 | 1713.85 |

Kindly see the Distribution tariff of Rs. 671.48/kVA/Month proposed for 11 kV which is more than Rs.475/kVA/Month. The proposed tariff is totally wrong and cannot be justified. No 11 kV OA consumer can afford this tariff.

For example, consider a case of conventional Generator supplying power to consumers at all the three voltages i.e., 132 kV, 33 kV, 11 kV and LT consumers.

K. Muli Enterprise RR S01512 RR

The PLF for conventional power is 100%. One kW of conventional power can transmit around 720 units in a month.

The corresponding per unit costs is as shown below:

The Transmission wheeling cost at 132 kV = 221.17/720 = Rs.0.31/kWh.

The Distribution wheeling cost at 33 kV = 64.26/720 = Rs.0.09/kWh.

The Distribution wheeling cost at 11 kV = 671.48/720 = Rs.0.932/kWh.

The Distribution wheeling cost at LT Voltage = 855.80/720 = Rs.1.19/kWh.

In case of a NCE generator with PLF of 23.5% supplying power to consumers at all the three voltages i.e., 132 kV, 33 kV and 11 kV consumers.

The PLF of Wind Power plant is around 20% to 23.5%. One kW WPP can produce around 169.2 units in a month. The corresponding costs are as shown below.

The Transmission wheeling cost at 132 kV = 221.17/169.2 = 1.30/kWh.

The Distribution wheeling cost at 33 kV = 64.26/169.2 = 0.37/kWh.

The Distribution wheeling cost at 11 KV = 671.48/169.2 = 3.96/kWh.

The Distribution wheeling cost at LT Voltage = 855.80/169.2 = Rs.5.05/kWh.

| Voltage RST (Tariff)<br>Rs./kWh. |      | Proposed<br>Tr/Wheeling<br>tariff for FY<br>2025- Rs/kW<br>/month | Proposed<br>Tr/Wheeling<br>tariff in Rs/kW<br>(Conventional<br>Power) | Per unit<br>wheeling cost<br>for NCE<br>Generators.<br>(Rs./kWh) | Generator<br>Maximum<br>selling price<br>Rs./unit |  |
|----------------------------------|------|---|---|--|---|--|
| (1)                              | (2)  | (3)   | (4)   | (5)  | (6)=(2)-(5)                                       |  |
| 132 kV                           | 5.40 | 221.17  | 0.31  | 1.30   | 4.10  |  |
| 33 kV                            | 5.85 | 64.26   | 0.09  | 0.37   | 5.48  |  |
| *11 kV                           | 6.30 | 671.48  | 0.93  | 3.96   | 2.34  |  |
| LT                               | 6.70 | 855.80  | 1.19  | 5.05   | 1.65  |  |

| Voltage | Conventional Power with<br>PLF of 100% Rs./kWh.<br>(Energy Wheeling cost) | NCE Power with PLF of<br>23.5% Rs/kWh (Energy<br>Wheeling cost) | Difference<br>(Extra cost to NCE) |  |
|---------|---|---|-----------------------------------|--|
| (1)     | (2)   | (3)   | (4)                               |  |
| 132 kV  | 0.31  | 1.30  | 0.99                              |  |
| 33 kV   | 0.09  | 0.37  | 0.28                              |  |
| 11 kV   | 0.932   | 3.96  | 3.028                             |  |
| LT      | 1.19  | 5.05  | 3.86                              |  |

\*To sell power to a 11 kV Consumer, a generator has to sell power @ Rs.2.34 per unit which is not practically viable (assuming both generator and consumer are at the same voltage level and within the same discom).

This indicates that the methodology adopted by the Hon'ble Commission is erroneous. In this regard, we submit to the Hon'ble Commission to take corrective action and determine reasonable energy based Transmission and wheeling tariffs.

8. The proposed Distribution tariff of Rs.671.48 is 141% of Demand charge of Rs.475/kVA/Month, which is very high. We are not able to comprehend the reasons for fixation of higher Distribution wheeling tariff while maintaining the Retail Power Supply tariffs intact. If the present tariff is built into the RST, RST perhaps would definitely go up. Or the reason behind the hiking the Distribution business Tariff alone may be to discourage Open Access consumers, which is against the spirit of the Electricity Act, 2003 and is unlikely to meet anticipated competition, efficiency and addition of new generation.

## 9. Drawback in the present method:

(i) Due to apportioning of 33 kV network cost to 11 kV and LT network based on the asset base utilization by the respective voltage level consumers, the wheeling tariff for 33 kV consumers is relatively less when compared to 11 kV tariff and EHT transmission tariff. The same can be observed from the following tables.

K. Muur RR S01512 R

| Table-1 MYT Tariffs for 2014-15 to 2018-19 |         |         |         |         |         |  |  |
|--|---------|---------|---------|---------|---------|--|--|
| Voltage                                    | 2014-15 | 2015-16 | 2016-17 | 2017-18 | 2018-19 |  |  |
| EHT tariff Rs./kW/Month                    | 65.30   | 71.66   | 91.36   | 95.37   | 94.44   |  |  |
| 33kV Rs./kW/Month (EPDCL tariff)           | 13.46   | 10.98   | 11.38   | 11.80   | 12.22   |  |  |
| 11kV Rs./kW/Month (EPDCL tariff)           | 240.15  | 232.39  | 247.55  | 262.96  | 279.50  |  |  |

Note 1: Please note that the 11 kV EPDCL tariff varies from Rs.240 to Rs.279 for 2014 to 2019. The 11 kV wheeling tariff is almost 50% of Demand charge of 475/kVA/Month. This indicates that there is some error in computing these charges.

| Table-2 MYT Tariffs for 2014-15 to 2018-19 |         |         |         |         |         |  |  |
|--|---------|---------|---------|---------|---------|--|--|
| Voitage                                    | 2014-15 | 2015-16 | 2016-17 | 2017-18 | 2018-19 |  |  |
| EHT tariff Rs./kW/Month                    | 65.30   | 71.66   | 91.36   | 95.37   | 94.44   |  |  |
| 33kV Rs./kW/Month (SPDCL tariff)           | 7.66    | 15.51   | 15.39   | 15.11   | 15.17   |  |  |
| 11kV Rs./kW/Month (SPDCL tariff)           | 164.61  | 220.82  | 227.14  | 232.16  | 240.68  |  |  |

Note 2: Please note that the 11 kV SPDCL tariff varies from Rs.164 to Rs.240 for 2014-2019. The 11 kV wheeling tariff for 2018-19 is almost 50% of Demand charge of 475/kVA/Month. This indicates that there is an error in computing these charges. Observe the huge variation; the APSPDCL tariff begins at 164 for year 2014-15 against APEPDCL tariff of Rs.240/kW/Month.

| Table-3 MYT Tariffs for 2019-20 to 2023-24 MYT |         |         |         |         |         |  |  |
|--|---------|---------|---------|---------|---------|--|--|
| v) Voltage                                     | 2019-20 | 2020-21 | 2021-22 | 2022-23 | 2023-24 |  |  |
| EHT tariff Rs./kW/Month                        | 119.28  | 138.88  | 154.54  | 173.79  | 188.38  |  |  |
| 33kV Rs./kW/Month (EPDCL tariff)               | 45.24   | 48.38   | 54.73   | 59.51   | 61.92   |  |  |
| 11kV Rs./kW/Month<br>(EPDCL tariff)            | 349.71  | 375.94  | 427.50  | 467.43  | 439.07  |  |  |

Note 3: Please note that the 11 kV EPDCL tariff varies from Rs.349 to Rs.439 for 2019 to 2023. The 11 kV wheeling tariff for 2019-20 is almost 73% of Demand charge of 475/kVA/Month. This indicates that there is an error in computing these charges. Correspondingly the 11 kV retail tariff should reflect this cost impact. But it is not so.

| Table-4 MYT Tariffs for 2019-20 to 2023-24 MYT |         |         |         |         |         |  |  |
|--|---------|---------|---------|---------|---------|--|--|
| vi) Voltage                                    | 2019-20 | 2020-21 | 2021-22 | 2022-23 | 2023-24 |  |  |
| EHT tariff Rs./kW/Month                        | 119.28  | 138.88  | 154.54  | 173.79  | 188.38  |  |  |
| 33kV Rs./kW/Month (SPDCL tariff)               | 61.16   | 64.11   | 69.34   | 75.44   | 79.48   |  |  |
| 11kV Rs./kW/Month (SPDCL tariff)               | 432.38  | 447.58  | 478.38  | 514.76  | 536.83  |  |  |

Note 4: Please note that the 11 kV APSPDCL tariff varies from Rs.432 to Rs.536 for 2019 to 2023. The 11 kV wheeling tariff for 2019-20 is almost 90% of Demand charge of 475/kVA/Month. This indicates that there is an error in computing these charges. Correspondingly the 11 kV retail tariff should reflect this cost impact. But it is not so.

Form table (3) and (4), kindly observe the variation in wheeling tariffs in between APSPDCL and APEPDCL.

- 10. From the above tables, it can be observed that there is abnormal variation in EHT, 33kV and 11 kV tariffs. The reasons for the abnormal variation are mentioned below:
  - a) O&M Expense allocation
    - 1) Employee Expenses (EE) and Administrative & General Expenses (A&G) Please see para 2.3.1 of Page 20 of ARR

Employee expenses and A&G expenses have been apportioned as per the distribution of No. of Consumers, Number of DTRs, Length of lines and Number of SS.

- a) Licensee projected the voltage wise No. of Consumers, Number of DTRs, Lengths of lines and number of SS and then observed voltage-wise percentage of each of these parameters.
- b) As per employee expenses and A&G expenses projections done in section 1.6, licensee allocated these expense into SS, line length, DTR and consumer in the ratio of 49%. 21%. 10%. 20%.
- c) Expense allocation of SS, line length, DTR and consumers are then apportioned to LT, 11kV and 33kV voltage level as per the observed percentages of these parameters.
- d) The allocated ratios mentioned in para (b) are assumed percentages and erratic. There is no basis for these numbers. The details of observed percentages mentioned in para (c) are not mentioned here.
- e) Grossing up of loads to higher voltages. This is explained in the following paras:

Note 1: One of the main reasons for the increase in 11kV wheeling tariff is that the 11kV network cost increased due to implementation of HVDS network for Agricultural consumers. While implementing HVDS scheme, LT network is converted into 11 kV HT network. The 11kV HVDS network cost need to be excluded to arrive at 11 kV wheeling tariff if voltage wise wheeling tariffs are to be determined.

Note 2: All the DISCOMs have considered and assumed the same percentages mentioned in the Para 12(1)(b). Practically it is not possible to have same line lengths, SS and DTRs etc. Kindly consider the assumptions made and a corrective action may please be taken.

11. What should be the philosophy to determine wheeling tariff?

The Hon'ble Commission may please examine the methodology followed while determining Development Charges and treatment of losses in determining the Retail Supply Tariffs (RST). The Hon'ble Commission has issued a Tariff Philosophy wherein a concept called rationalization of tariffs was published during 1999-2000. The concept is nothing but balancing the tariffs in between affordability (paying capacity) to pay the tariff determined by the Commission and Cost of Service of Power.

The Commission adopted the concept of rationalization of tariff's while fixing Development charges and treatment of losses while determining RST. The Commission also followed tariff philosophy while recovering the Transmission Cost, SLDC Cost, Distribution Cost, PGCL Expenses, and ULDC charges etc.

12. The power system is designed in an efficient, economic and for optimum utilization of network assets. Based on the power capacity to be transmitted, the transmission system and sub transmission system is designed. The assumption of existence of 33 kV network is to meet the demand of 11 kV network consumers and LT consumers may not be correct. Similarly, the assumption of networks of 33 kV and 11 kV exist to meet the demand of LT consumers is also not correct. They are interdependent. Without LT & 11 kV consumers, the 33 kV consumers cannot survive and vice versa is also true.

K. Municonterprise RR 501512 &

From the above, it is evident that the system requires all consumers for economical and efficient operation of the power system. Hence, wheeling tariff rate can be determined taking the total ARR of distribution business and dividing the same with the total sales (both DISCOM sales and OA sales and excluding EHT sales).

13. The Wheeling tariffs proposed by DISCOM are very high compared to Demand charges of Rs.475/kVA/Month and it appears that there is some error in the methodology followed by the DISCOMs. The Hon'ble Commission may also need to follow Tariff Philosophy mentioned in para 11 while determining the Wheeling charges.

Allocation of network costs to 33 kV, 11 kV and LT system based on the Demand consumption is not the right approach. For the reasons mentioned above, we submit to the Hon'ble Commission to do away with the methodology of allocating network costs to 33 kV, 11 kV and LT based on respective demand consumption.

On a larger picture, we emphasis to withdraw wheeling charges for NCE generators, as we are availing Open Access within the limits of CMD and we have already paid the necessary charges from the consumer end, through HT connection.

Further more, distribution licensees are spending huge amounts in developing infrastructure every year, which should be actually resulting in decrease of charges and losses. But surprisingly, losses and charges are increasing even after huge investments in developing infrastructure.

14. In view of the reasons / submissions mentioned above, we humbly request the Hon'ble Commission to determine in a reasonable way, energy based wheeling charges for Transmission and distribution networks instead of the proposed capacity based charges. The proposed charges will debilitate the renewable energy industry, whose PLF is only around 20-23% and will be counter productive to the universal objective of promoting clean energy.

Thanking you,

Yours faithfully,

**K.NAVEEN** 

**Authorized Signatory**
